Introduction to the CAVA (Climate and Agriculture risk Visualization and Assessment) framework

Riccardo Soldan

March 2023

1. Understanding what CAVA is
2. Quick tour of CAVA Platform
3. Deep dive into CAVA Analytics

All the necessary information and material used in this training is available in our

[GitHub repository](#)

Introducing the problem

- Pre-computed data
- Limited in the analysis that can be performed
- Limited customization of exported information
- ..

Platforms,
Secondary data sources,
GUI

- Expensive
- “Only” offers computational resources and access to data (COPERNICUS DIAS?)
- ..

Cloud computing,
download and process
their own data

?

Standard user

Intermediate user

Advanced user

Introducing our approach

Platforms

Cloud computing

- More flexible than Platforms but more constrained than Cloud computing (set up your own VM, etc)
- Not expensive
- Something in between?

Standard user

Intermediate user

Advanced user

Introducing our approach

CAVA Platform (general user)

- Freely accessible
- Produces automatic reports
- Focuses on agroclimatic indexes

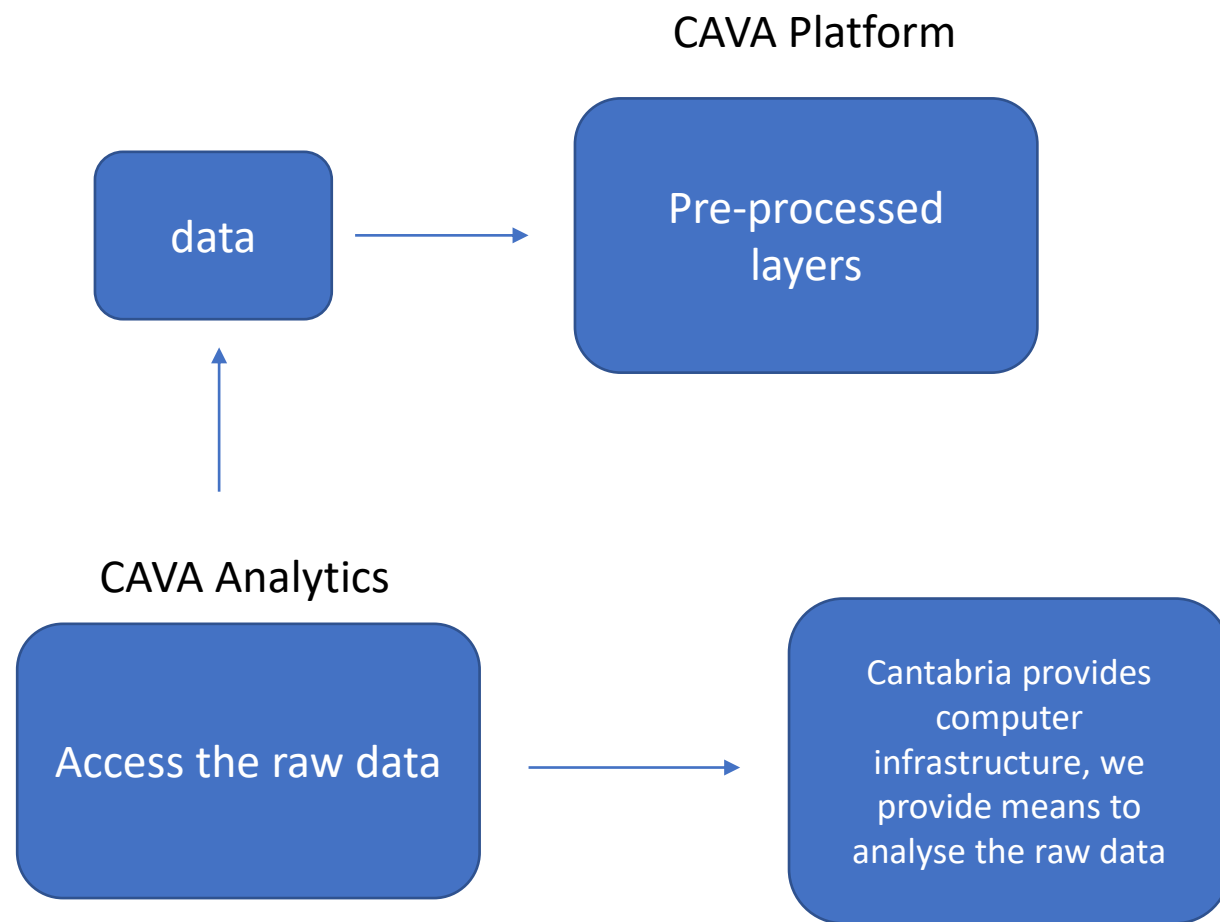

CAVA Analytics (specialised user)

- Pre-set Cloud infrastructure
- Access to raw data
- Analysis performed on the fly
- Environment that allows user to quickly learn how to perform analysis

The CAVA framework

Thank you!
